

Please refer to our website for detailed information about the tasks listed in this schedule. Dates may vary slightly due to your location and climatic conditions.

MONTH	JANUARY	FEBRUARY	MARCH	APRIL	MAY	JUNE	JULY	AUGUST	SEPTEMBER	OCTOBER	NOVEMBER	DECEMBER
If your lawn variety needs water during summer, water your lawn when needed up to three times each week. Ensure your lawn is watered deeply.												
Apply wetting agent over your lawn to improve water penetration, enhance efficiency of watering and fertilisers and help prevent dry patch.												
Apply a quality, high nitrogen, slow-release lawn fertiliser at regular intervals to keep your lawn healthy and green.												
Spray your lawn for flat weeds.												
Spray summer grasses in your lawn.												
Spray Poa Annua in your lawn.												
Spray your lawn with a Pre-Emergent treatment to help prevent the growth of summer grasses and weeds.												
Have your lawn treated for Grass Grub. We spray with Acelepryn, a preventative treatment to protect your lawn over summer.												
Watch for insect damage and treat as needed.												
Treat moss.												
Repair any dead/worn patches.												
Have your lawn de-thatched if needed to remove the dead layer of thatch at the base of your lawn and to improve the penetration of air, nutrients and water.												
If necessary, arrange for your lawn to be cored for total rejuvenation of tired soil and lawns.												
Your lawnmower won't be getting as much use now so it's a good time to give it a service and check that blades are sharp.
